

2008年度 第22回 地質学セミナー

日時: 2月18日(水) 17:00~
場所: 総合研究棟B112

発表者: 小川勇二郎教授 (地球変動科学)

デュプレックスはどこに形成されるか？：
地球科学における必要十分条件の議論によせて

The positive proof in science comes from both necessary and sufficient conditions for a certain theme, but in fact these conditions are not always present in some science. Particularly in some historical science, for instance in most of the geological sciences, lack of either is common. Therefore, in order to approach the best solution, we need to provide either of the two, or to collect as many lines of indirect evidence as possible. I will select such topics, exemplifying the duplex structures as far as I have ever experienced in the field and texts, and discuss as MUCH as possible in order to approach 'real science'.

One-horse duplex at Arasaki, Miura Peninsula

Where are duplex structures formed?:
Necessary and sufficient conditions in earth science
